LOW FLOW RATES
LARGE IRRIGATION BLOCKS, EASY TO MANAGE

Ag

**LOW
FLOW RATES**

Aqua-Traxx® PBX, the original Toro drip tape, provides unmatched clog resistance, durability and precision placement of your valuable water and fertilizer.

THE CHOICE OF THE TAPE

When choosing the right emitter's flow rate, several variables must be taken into account, such as the crop, the type of soil, the availability of the water and the irrigation scheduling.

Drip tape with low flow emitters allow to design large irrigation blocks easy to manage.

Ag

LOW FLOW RATES

LARGE BLOCKS EASY TO MANAGE

Drip tapes with low flow emitters allow:

- Long laterals even when choosing closely spaced emitters;
- Large irrigation blocks;
- Reduced system costs (less submains, valves and fittings);
- Lower cost for system automation;
- Reduced labor cost for installation and operation;
- Better and easier fertigation.

HEAVY SOILS

The choice of low application rates will help reduce runoff and puddling in low infiltration rate soils such as clays and clay loams.

LOW ENVIRONMENTAL IMPACT

Low flow rates allow to keep the wetting pattern constantly in the root zone. This maximizes the efficiency and prevents fertilizers from polluting the groundwater.

Ag

LOW FLOW RATES

Aqua-Traxx® PBX 22 mm diameter with 0.38 l/h emitters every 40 cm can deliver the water for more than 700 m with 90% Emission Uniformity.

The picture show the uniformity at the end of the line.

THERE IS AN AQUA-TRAXX DRIP TAPE FOR EVERY APPLICATION.
